

# Do you or someone you love have Prader-Willi syndrome (PWS)?

## Harmony Biosciences is seeking people ages 6-65 with PWS to enroll in a clinical trial

We will be studying the safety and impact of an investigational medication on excessive daytime sleepiness, cognition, and behavioral function in people with PWS.

### What is required?

Your participation in the trial lasts approximately 4 months. During that time, there are 5 planned visits.

#### Patient

##### If you are a patient...

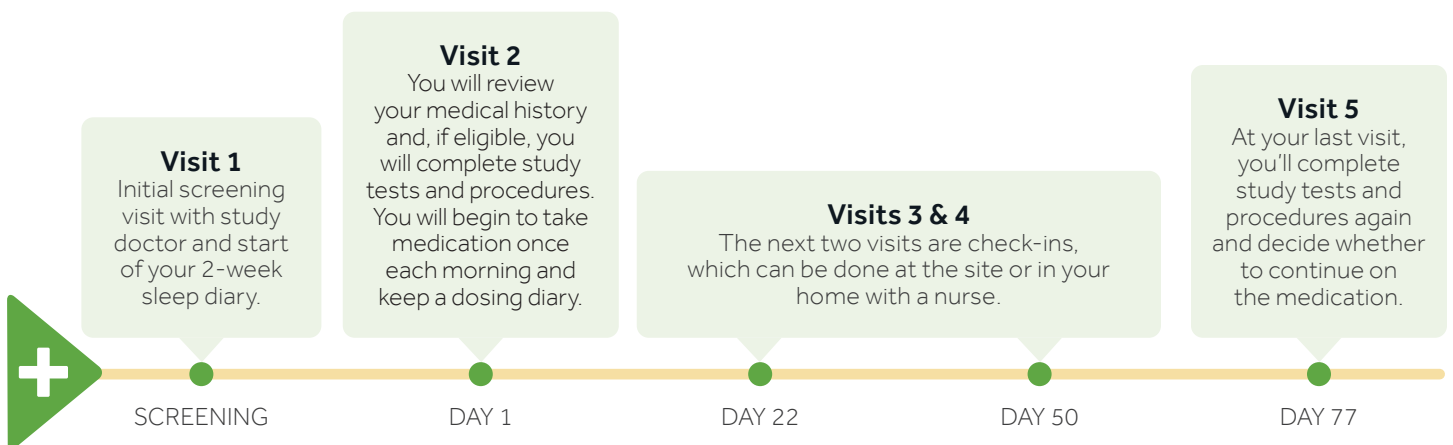

At your visits, you'll participate in study procedures and have general check-ins on how you're feeling.

#### Caregiver

##### If you are a caregiver...

You'll attend all visits with the patient and help provide information to the trial researchers.

#### All Visits

If you're the caregiver of someone with PWS, here are some things you should know about your role:

You'll need to accompany the patient to all visits.

You may need to help make sure the patient keeps their sleep and dosing diaries up to date.

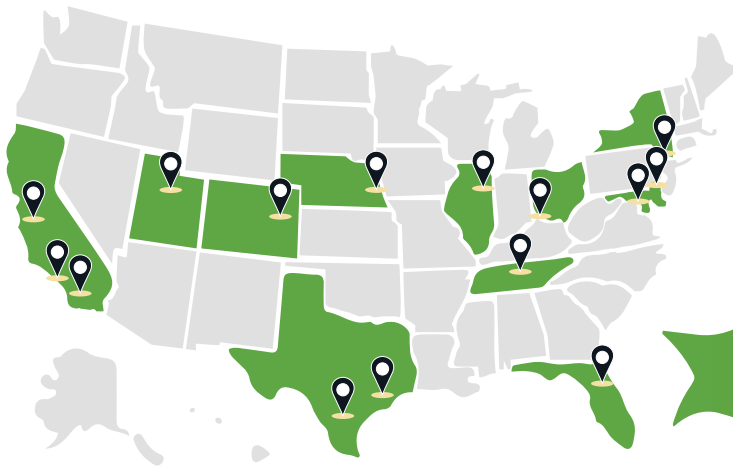

You will be asked to complete questionnaires on the patient's symptoms and your own caregiver burden.

The trial site will check in with you via phone between visits.

## Where is the trial?

THERE ARE  
**15 Trial Sites**  
Around the US

Travel expenses to  
the site most convenient to  
you will be reimbursed by  
Harmony Biosciences

### Current Sites:

- San Diego, CA
- Santa Monica, CA
- San Ramon, CA
- Aurora, CO
- Wilmington, DE
- Gainesville, FL
- Chicago, IL
- Omaha, NE
- New York, NY
- Cincinnati, OH
- Baltimore, MD
- Nashville, TN
- Houston, TX
- San Antonio, TX
- Salt Lake City, UT

## More to consider

### Clinical trials are essential for the development of new treatments.

Every new medication and treatment starts with volunteers participating in clinical trials. Clinical trials provide the information that is needed to get new treatments approved so they can be available to healthcare professionals to prescribe to patients.

- After the completion of this trial, participants will have the option to enter into the long-term safety trial to continue to help researchers collect information.
- If you choose to continue, you will have periodic check-ins with the trial site and continue to receive the trial drug.
