PWS Awareness Month
Fact Toolkit
FACT #1

PWS affects one in 15,000-20,000 births.
FACT #2

PWS affects all races and genders equally.

Doctors Prader, Willi, and Labhart discovered PWS in 1956 based on the clinical features of nine children. Since 1956, diagnosis has been confirmed through genetic male testing as early as a few days after birth.
There are 3 main genetic causes of PWS:

- Uniparental Disomy
- Deletion
- Imprinting Defect
Deletion occurs when the 15q11-13 region is missing on the paternal chromosome 15.

- 51% of individuals with PWS have deletion
- There are several deletion subtypes
The imprinting defect occurs when the 15q11-13 region is inactive on the paternal chromosome 15.

- Found in less than 5% of people with PWS
- The only type that can be hereditary
FACT #7

Uniparental Disomy (UPD) occurs when the child receives two chromosome 15s from Mom and none from Dad.

- UPD affects 38% of people with PWS

Infants with PWS may require the use of feeding tubes to obtain adequate nutrition.

#PWSAwarenessMonth
www.pwsausa.org | (941) 312-0400
Individuals with PWS have an incidence of developing scoliosis at rates between 40-90%. Thankfully, there are several treatment options available.
FACT #11

Impaired vision is a treatable symptom of PWS, either with corrective lenses or surgery.

#PWSAwarenessMonth
www.pwsausa.org | (941) 312-0400
FACT #12

Hypogonadism and cryptogonadism are common in infants with PWS. Treatment options include medication and surgical intervention.

#PWSAwarenessMonth
www.pwsusa.org | (941) 312-0400
FACT #13

Many individuals with PWS have sensory integration deficits in the vestibular, proprioceptive, tactile, and oral-motor systems. A sensory integration program designed by an Occupational Therapist is the most common form of treatment.

#PWSAwarenessMonth
www.pwsusa.org | (941) 312-0400
FACT #14

Many individuals with PWS have decreased pain signals, often masking injuries and illness.

#PWSAwarenessMonth
www.pwsusa.org | (941) 312-0400
Excessive Daytime Sleepiness (EDS), cataplexy, and narcolepsy affect many individuals with PWS. There is at least one pharmaceutical trial drug showing promising results in the management of EDS. PWSA has gathered important information from our **Sleep Summit** and will be unveiling a Sleep Resource Section on the website this year.
Individuals with PWS experience high levels of anxiety that negatively affects functioning. With the help of therapies, social stories, and medication, anxiety may be better managed.
FACT #17

Hypotonia affects individuals with PWS throughout their lives. The use of growth hormone, play, and therapies improves muscle tone.

#PWSAwarenessMonth

There is no one best “PWS” diet. Following what is sustainable for your family is best. Making healthy lifestyle choices, limiting processed foods, and eating a diet focused on natural whole foods and healthy fats are encouraged.
FACT #21

Temperature regulation can be a concern for individuals with PWS. They may overheat on a warm day or be at risk for hypothermia on a cold day.

#PWSAwarenessMonth
www.pwsausa.org | (941) 312-0400
FACT #22

PWS is one of 10,000 rare diseases. This is why we need you to join our advocacy efforts.

#PWSAwarenessMonth

Like other spectrum disorders, individuals with PWS may have difficulty reading facial expressions and social cues. The use of social stories can help identify emotions.
FACT #24

At PWSA | USA, we work to integrate what we have learned about the needs of our families with research that will make a practical difference in the lives of those affected by PWS.

FACT #25

Historically, measured IQs range from normal to moderate intellectual disability. Many individuals with PWS are now working on post-secondary education goals.

#PWSAwarenessMonth
www.pwsusa.org | (941) 312-0400
FACT #26

Hyperphagia symptoms commonly begin between ages 3 and 8. Many families utilize cabinet and refrigerator locks to keep their loved ones safe and decrease anxiety. There are drugs in clinical trials that show promise in treating hyperphagia.

#PWSAwarenessMonth
www.pwsusa.org | (941) 312-0400
Individuals with PWS are at increased risk for choking, subclinical dysphagia (silent choking), and aspiration and should be supervised while eating or drinking.
FACT #28

Many families utilize cabinet and refrigerator locks to keep their loved ones safe and decrease anxiety.

#PWSAwarenessMonth
www.pwsausa.org | (941) 312-0400
Many individuals with PWS have poor impulse control, placing them at risk of injury or harm. The use of social stories and therapy may improve impulse control.
FACT #30

Many individuals with PWS present with speech and language deficits. Speech therapy is often provided through early intervention services.
